

## MB Bäuerle presents a configuration for the fully automatic banding of folded sheets

At the Grafitalia 2009 MB Bäuerle recently presented the fully automatic folding machine prestigeFOLD NET 52 in connection with a banding system from ATS-Tanner. In this configuration the folded sheets are transferred to a conveyor belt and stacked. Upon infeeding, a corner slider pushes the stacks directly into the banding machine US-2000 FAB-A. As needed, the bundles can be tightly banded once or twice, taking care that the edges are protected.

Fully-automatic folding machine prestigeFOLD NET 52 with banding system US-2000 FAB-A

### Specifications of Banding System US-2000 FAB-A:

Min. format: 90 mm x 110 mm

Max. format: 330 mm x 560 mm

Stack height: 5 mm - 100 mm

Max. speed: 220 m/min
