

prestigeFOLD NET with pharmaceutical fold unit for minimum fold lengths

The fully automatic folding machines of the prestigeFOLD NET line of folders can now be equipped with a new unit for pharmaceutical folds. With this auxiliary equipment it is possible to create products with a **minimum fold length of 28 mm**. This has been reached by means of the paper stop in the fold plate. The high degree of automation allows the complete setting of the machine via the central touch screen display. All setting elements at the flat pile feeder, fold plate stops, deflectors, fold rollers, alignment rails and delivery rollers are set automatically, without the interference of an operator.

The combination with the following optional devices and accessories permits the processing of pharmaceutical package inserts, light weight paper and other products with small folds or glued products:

- Additional fold unit KF 31 for small folds
- Mobile knife fold unit MS 45
- Reading systems for code recognition
- Labelling systems
- Gluing systems
- Waterscoring unit
- Small format vertical stacker SKM 36

Small folds with a minimum **fold length of 28 mm** can be set **automatically**.
