

smartFOLD with new design

The reliable table-top folding machine smartFOLD has been given a new design. The new colour scheme makes it look more attractive and up-to-date. It is now also possible to swing up a feed table extension. The smartFOLD is the ideal machine for routine applications in an office environment. The sturdy design of the folder and the speed of 20,000

sheets per hour even permit the effortless production of large folding jobs. For large runs, the smartFOLD can also be equipped with an extended delivery section (power stacker) as an option. Practically all settings at the machine can be made automatically by means of the computer control. The most important types of fold are already pre-programmed. Memory spaces are available for individual folding jobs.

trendFOLD with modified feeder

As of now, the trendFOLD folding machine is equipped with a new feeder as a standard feature. Its main characteristic is the considerably higher capacity of 250 sheets (for 100 GSM paper). Moreover, several details in the feeder area have been improved, making settings and the handling of the machine easier. The trendFOLD is ideal for simple folding jobs in the office. The machine is set automatically at the push of a button. As an option, it can be equipped with a pressure seal device for the efficient production of "pressure seal forms".

Their specific product features make the smartFOLD and trendFOLD especially suited for being sold in large quantities through shops specialising in equipment for offices or through mail order companies.
