

trendSEAL FOLDER – Computer-controlled folder with sealer

The trendSEAL FOLDER is a folding machine for the office with integrated pressure sealer for the efficient handling of confidential documents. By using "pressure seal forms", which have a pressure-sensitive partial gluing at the edge, these documents can be reliably sealed in the pressure sealer. This is achieved by means of high pressure which activates the glue on the paper.

The machine is set automatically by simply pushing a button. A special know-how is not needed. The folder can also be used separately without the pressure sealer. The most frequent types of fold are programmed. Additional folds can be set and saved in the memory by pushing a button. The machine stops exactly after the pre-set quantity.

trendSEAL FOLDER

Simple operation by pushing a button

Special features of the machine:

- Integrated pressure sealer
- Automatic setting of types of fold
- 4 standard folds for A4-format
- 2 standard folds for A5-format
- Other folds are freely programmable
- Memory for 6 individual types of fold
- Feeder capacity for 250 sheets
